

testing::Test

```
classDiagram
    class testingTest["testing::Test"]
    class SDFormatParserTest {
        # std::shared_ptr< SDFormatParserI > sdformatParser
    }
    SDFormatParserTest --|> testingTest
```

The diagram illustrates a C++ class hierarchy. At the bottom is the `SDFormatParserTest` class, which is shaded gray and contains a protected member `# std::shared_ptr< SDFormatParserI > sdformatParser`. Above it is the `testing::Test` class, which is white with a gray border and has two empty slots for members. A blue arrow points from the top of `SDFormatParserTest` to the bottom of `testing::Test`, indicating that `SDFormatParserTest` inherits from `testing::Test`.

SDFormatParserTest

```
# std::shared_ptr< SDFormatParserI > sdformatParser
```
