

```
std::enable_shared  
_from_this< GUI >
```

```
graph BT; GUI1[GUI] --> GUI2[GUI]; GUI2 --> Enable[std::enable_shared_from_this< GUI >];
```

The diagram illustrates a C++ class hierarchy. At the bottom is a gray box labeled 'GUI'. An upward-pointing blue arrow connects it to a white box labeled 'GUI' in the middle. Another upward-pointing blue arrow connects the middle 'GUI' box to a larger white box at the top containing the text 'std::enable_shared_from_this< GUI >'. This represents a class that inherits from 'GUI' and uses the 'std::enable_shared_from_this' trait to manage shared pointers.
